

# Using system functions

The System Functions window provides access to administrative tools and settings that control basic operating characteristics of the system. Among these features and options are:

- Shutting down/restarting the application software and the Max PC.
- Setting the unit's speaker volume.
- Enabling/disabling "on-demand" processing of Rx orders.
- Enabling/disabling Auto-Run and Auto-Retry operating modes.
- Enabling/disabling Auto-Run operating mode.
- Enabling/disabling the left and right vial feeders.
- Backing up and restoring cell configurations.
- Resetting the Max's robotic arm and running diagnostics.
- Using the Label Wizard.

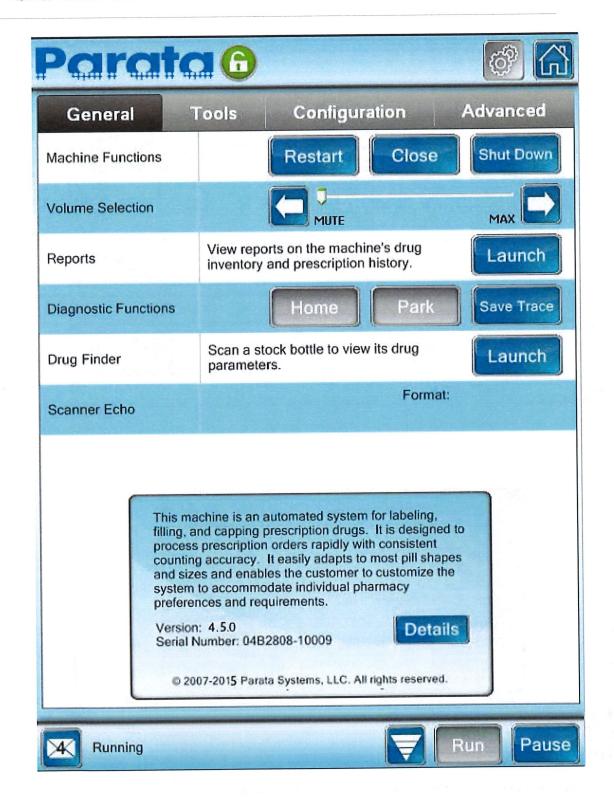

## System Functions window

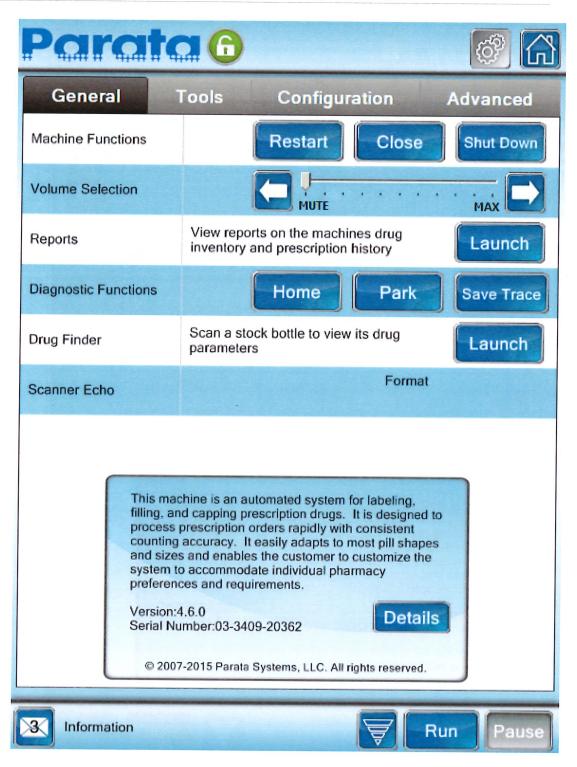

The System Functions window is available on both sides of the Max. The version of this window displayed on the *Inventory side*, however, does not offer all the functions and options available on the *Prescription side*.

On the *Prescription side*, the System Functions window consists of 4 tabs.

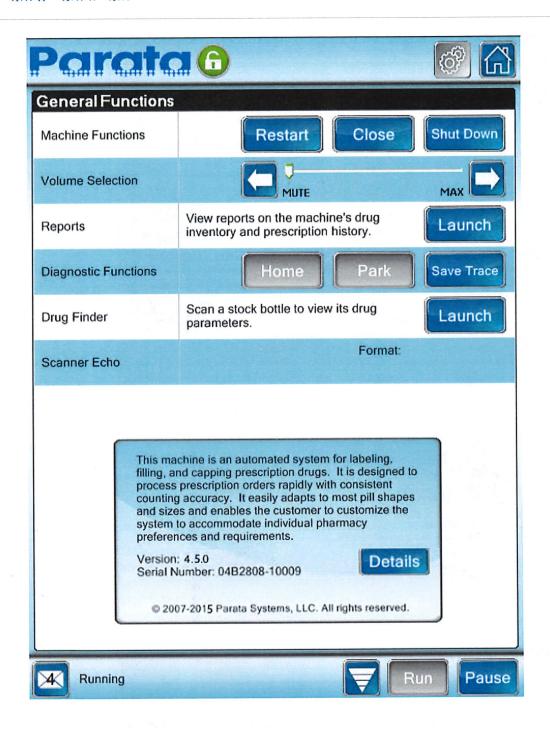

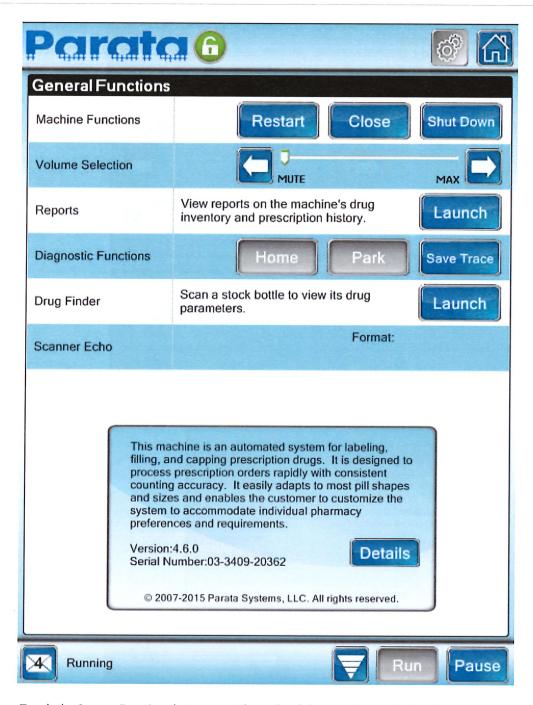

On the *Inventory side*, only the **General** tab functions (labeled General Functions) are available.

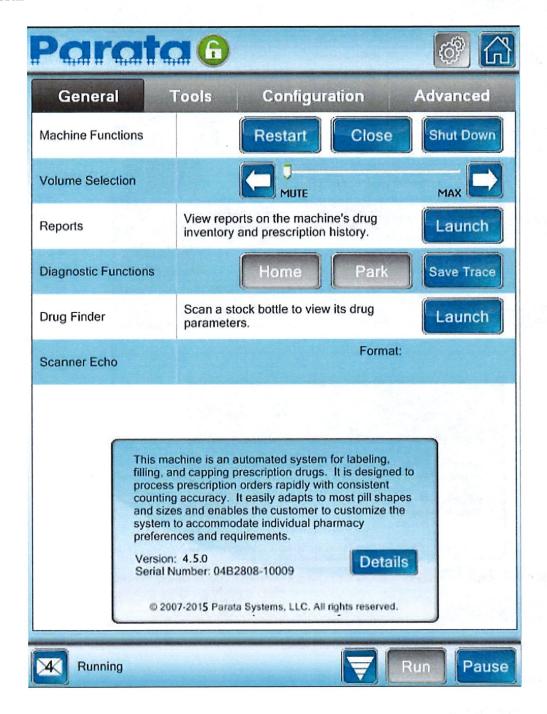

Touch the **System Functions** button on either side of the machine to display the System Functions window.

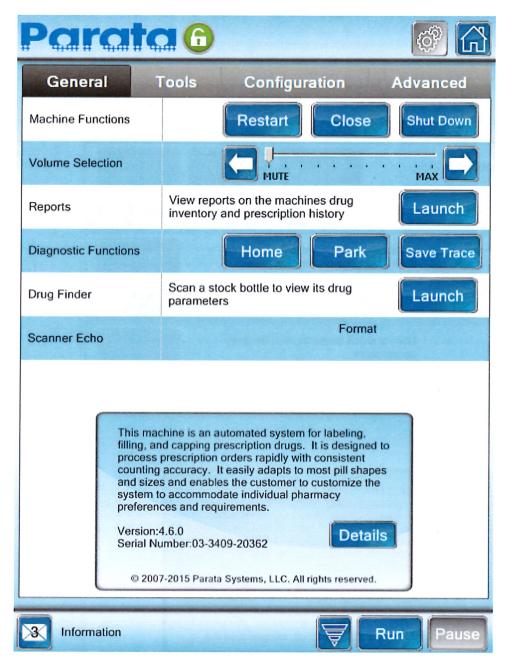

#### General

From the General tab, you can perform the following tasks:

- Shut down/restart the application
- Shut down the Max.
- Adjust the speaker volume
- Create, display, export and print reports

- Save a diagnostic "trace" file.
- Reset mechanical subsystems
- Scan a stock bottle and view its drug parameters
- Create stock bottle mappings<sup>4</sup>
- Perform a "scanner echo"
- Check the software version and unit serial number

**NOTE:**On the *Inventory screen*, only the **General** tab is available. All other system functions must be performed on the *Prescription screen*. These functions, however, require the Parata Support password.

### Shut down the system

From the General tab, you can shut down the Max applications, reboot the operating system and shut down the entire unit. These functions can be performed on either side of the Max.

- The Restart button closes and then restarts the Max applications.
- The Close button closes the Max applications only.
- The Shut down button shuts down the entire unit, including the PC.

The section Error! Reference source not found. provides more detailed information on shutdown procedures.

## Diagnostic Functions: Home System

Touching this button returns all mechanical subsystems to their starting ("home") positions.

NOTE: The Home button is accessible only when the Max is in Pause mode; otherwise, it is disabled.

DIN numbering method.

<sup>&</sup>lt;sup>4</sup> Not shown. This option is displayed at sites using the

### Diagnostic Functions: Park System

Touching this button moves all mechanical subsystems to safe positions in preparation for system maintenance.

NOTE: The Park button is accessible only when the Max is in Pause mode; otherwise, it is disabled.

Figure 25: The Home and Park buttons are disabled when the Max is in Run mode.

## Diagnostic Functions: Save Trace

A "trace file" is a log of events occurring on the Max, used primarily by system technicians for diagnostic purposes.

## Drug Finder

This utility lets you scan a stock bottle and view all information the MDL contains about that drug. If the drug is not in the MDL, a message will appear.

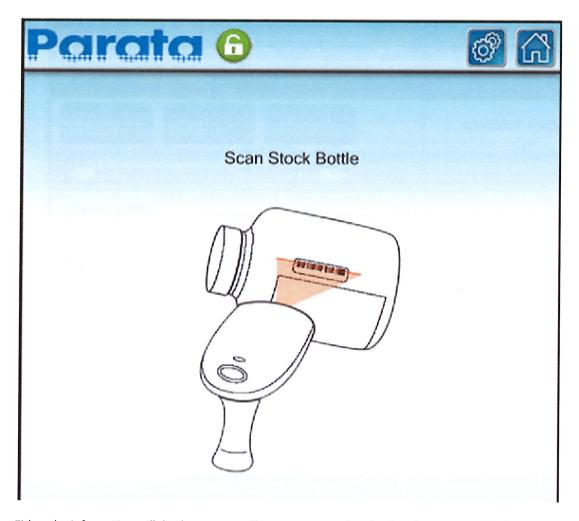

NOTE: The drug does not need to be housed in the Max.

When you touch the Launch button, you will be prompted to scan the bottle.

Either the information will display, or you will see a message that the drug is not recognized.

# Stock Bottle Mappings

This button, available *only* at installations that use the DIN numbering system, launches the Stock Bottle Mappings Wizard.

### Scanner Echo

When the **General** tab is selected and you use either scanner to scan a bar code, the bar code's format and encoded value are displayed in the **Scanner Echo** field, as shown in the following exampletwo examples:

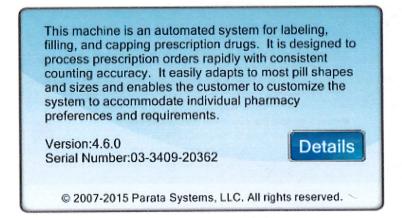

#### About

The About dialog box (appearing below the Scanner Echo field) displays descriptive information about the Max, as well as the unit's serial number and the version of the application software currently installed.

Figure 28: This window is similar to the one displayed on your system.

Touch the Details button to display additional unit-specific information.

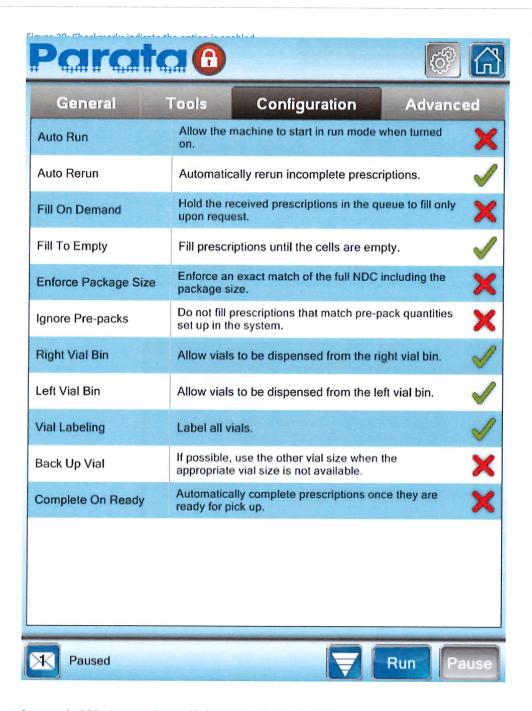

# Configuration

(Prescription side only)

**NOTE:** Access to these functions requires the Parata Support password. Please contact Parata Technical Assistance Center if you need a configuration item changed.

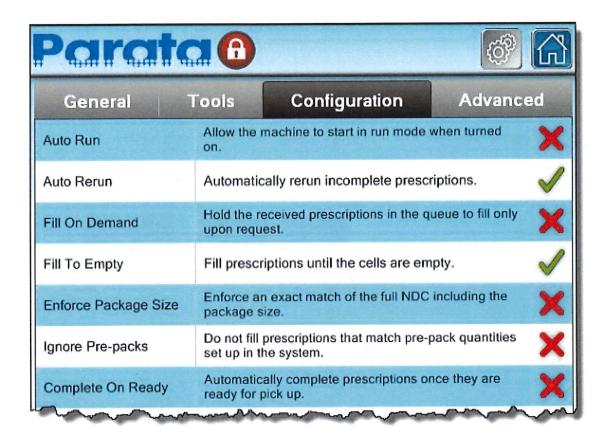

The options available on the **Configuration** tab let you customize certain elements of Rx order processing.

For example, Fill To Empty mode is enabled unless you elect to disable it.

### From the Configuration tab, you can:

- Enable/disable Auto Run mode (default = disabled)
- Enable/disable Auto Rerun mode (default = enabled)
- Enable/disable Fill On Demand mode (default = disabled)
- Enable/disable Fill To Empty mode (default = enabled)
- Enforce/ignore package size(default = disabled)
- Enforce/ignore pre-pack quantities (default = disabled)
- Enable/disable Right Vial Bin use (default = enabled)
- Enable/disable Left Vial Bin use (default = enabled)
- Enable/disable Vial Labeling mode (default = enabled)
- Enable/disable Back-up Vial mode (default = enabled)

Enable/disable Complete On Ready mode (default = disabled)

The Configuration tab displays "toggle" buttons that display the option's current setting and let you change it.

A green checkmark indicates the option is enabled. When you touch this button, the option is disabled.

A red "X" indicates the option is disabled. When you touch this button, the option is enabled.

#### Label Wizard

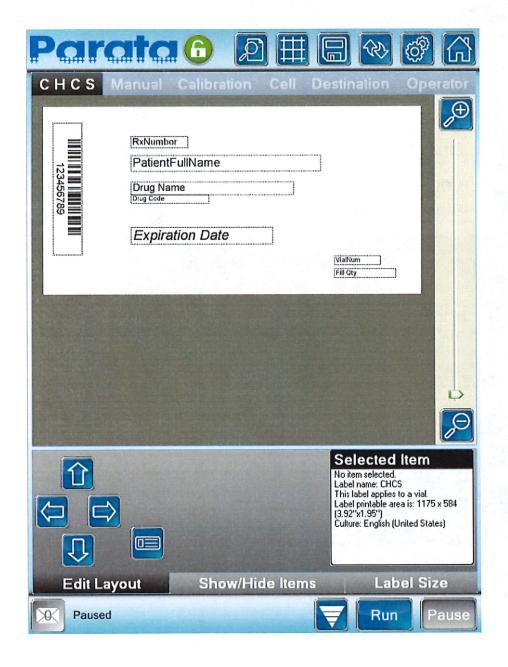

The Label Wizard is only accessible to administrative / support users. Please contact Parata Technical Assistance Center if you need your label edited.

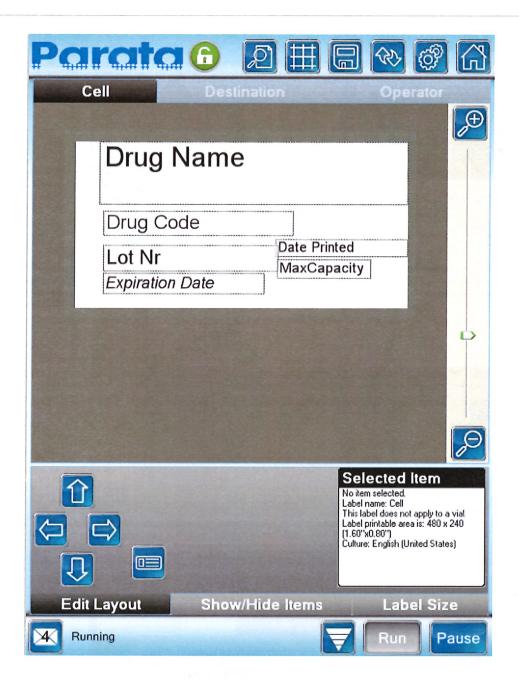

The Label Wizard is used to create and print cell labels and custom vial labels.

Figure 30: Label Wizard Main window

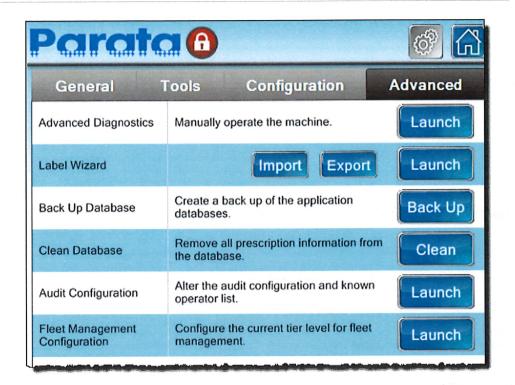

### Advanced

(Prescription side only)

**NOTE:** In general, only Parata technicians should use these functions. With the exception of Audit Configuration, access to Advanced functions requires the Parata Support password.

From the Advanced tab you can access the following features and options:

- Advanced Diagnostics
- Label Wizard
- Prescription Routing
- Back Up Database
- Clean Database
- Machine Configuration
- Audit Configuration
- Fleet Management Configuration
- Camera Diagnostics

## Backups

Your system's database is backed up automatically at predesignated intervals. These backups do not require operator participation—they run undetected.

NOTE: By default, script data retention for return to stocks older than 30 days is deleted.
